

Amendments to and Listing of the Claims:

Please amend claims 1, 4, 5, 6, and 7 so that the claims read as follows:

1. (Currently Amended) A crystalline polyester polyol which is the polycondensation reaction product of obtainable by polycondensation of:
a dicarboxylic acid component comprising
 - (1) 85 to 99 mol% of an aromatic dicarboxylic acid and
 - (2) 15 to 1 mol% of an aliphatic dicarboxylic acid of $\text{HOOC}-(\text{CH}_2)_n-\text{COOH}$ wherein n is 8 to 10, with
 - (3) an aliphatic diol component of $\text{HO}-(\text{CH}_2)_m-\text{OH}$ wherein m is 11 to 20.
2. (Original) The crystalline polyester polyol according to claim 1, wherein the aliphatic dicarboxylic acid (2) is dodecanedioic acid and the aliphatic diol (3) is 1,12-dodecanediol.
3. (Previously Presented) The crystalline polyester polyol according to claim 1, which has a melting point of 90°C to 120°C.
4. (Currently Amended) The crystalline polyester polyol according to claim 1, wherein an enthalpy of the polypol at crystallization on differential scanning calorimetry (DSC) is 55 J/g or more.
5. (Currently Amended) The crystalline polyester polyol according to claim 1, wherein a number average molecular weight of the polypol is 1,000 to 20,000.
6. (Currently Amended) A urethane prepolymer obtainable by reacting which is the reaction product of the crystalline polyester polyol according to claim 1 with and a polyisocyanate.
7. (Currently Amended) A hot-melt adhesive wherein comprising the urethane prepolymer according to claim 6 is used.
